

## Hamilton Aerial Lift Train the Trainer

Hamilton Aerial Lift Train the Trainer - The train the trainer program intended for aerial lifts helps to teach the trainers how to safely train prospective operators in an industrial situation. Trainers will be provided with in-depth instruction about the workings of aerial lift machinery. The program is offered on an open enrollment basis and delivered at selected training sites. Prior to certification, trainers are evaluated and graded on their demonstrated skills and knowledge.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the top training provider within the business, we offer top notch hands-on training. We provide plenty of chances to practice the concepts and techniques that are learned in the classroom. Along with hands-on experience, trainers develop general knowledge of instructional techniques and machine theory, field and classroom communication skills, and ability to successfully train and evaluate operators. Trainers would gain an understanding about what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional methods involved in communicating concepts inside a classroom and/or field situation. Knowledge needs a training part to be effective in workplace conditions. There are three factors of equipment operation which the trainer must learn how to convey to operators: what to perform; how to do it; and why it needs to be done.

In the program, trainers will be given the detailed, latest reference material to better help them convey the information to machine operators. The guidebooks utilized, contain detailed information on all aspects of industrial mobile machine operator training. Included in the package are training aids which provide a visual reference to be able to improve the learning experience. The equipment-specific training products include essential materials for both the trainer and the operator: videos/DVD's, overhead transparencies, equipment models, safety message posters; stability pyramids and digital training aids.
