

Hamilton Boom Lift Training

Hamilton Boom Lift Training - Aerial platforms or likewise known as elevated work platforms are devices that allow workers to perform tasks and duties at elevated heights that will not be otherwise reachable. There are a variety of aerial lifts on the market to perform various applications under various site conditions. If not carefully operated, elevated work platforms can lead to serious injury or death. The most common reasons for related accidents are falls, electrocution, crushed body parts and tip-overs. Lift operators must be completely trained in techniques to avoid accidents during the operation of lifts.

Aerial Lift Safety program is intended for individuals who have to operate the devices more safely and effectively. The program provides thorough instruction on the most used lifting devices within the business.. Types of lift covered consist of scissor, articulating and boom supported aerial lifts. The video presents the correct methods operators must follow. Instruction focuses on pre-operational inspection, protection against falls, stability of the device and safe driving procedures.

The boom lift training program would help to address equipment reliability and employee safety, using materials that are completely compliant with your regional and local requirements and regulations. Training techniques and course management would be taught. The trainer would likewise know the technical aspects of aerial lift safety.

Both practical training and classroom training are components of the Aerial Platform/Boom Truck Training course. Both sessions must be finished successfully for the participant to be given a certificate of achievement.

The difference between self-propelled elevating work platforms and self-propelled boom-supported elevating work platforms is that, on the latter type, work platforms can be positioned totally beyond the base of the machine. The theoretical component of the training is almost the same for both kinds. The practical part of the training can be completed more quickly if only one kind of machine is utilized.

Elevating Work Platform Training Program Objectives:

For the safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training will help operators make use of their machinery more efficiently and will lessen the possibilities of workplace accidents. Trainees would review of applicable regulations and company policies, talk about Due Diligence, review Criminal Negligence and consequences to trainers, employers, supervisors and workers. Participants will study equipment features, operating procedures, stability, fueling/charging procedures and parking. Site-specific safety matters will be dealt with.
